SUMMARY

Computer Engineering student focused on systems, infrastructure, and backend engineering. I build and operate software end to end, from a peer-to-peer voice and text system in **Rust/QUIC** to self-hosted **Docker/Nginx** services with CI/CD and observability. Comfortable with **Linux, networking, Rust, Go, containers, and monitoring**, with hands-on experience shipping and maintaining open-source and backend systems.

EDUCATION

Marmara University Istanbul, TR
BS in Computer Engineering (GPA 3.34/4.00) — Minor in Business Administration 2024 – Present
Universidad de Oviedo Oviedo, ES
Erasmus+ Exchange Student, Computer Science 2026

SELECTED PROJECTS

tincan — Serverless P2P Voice & Text Chat (150+ GitHub Stars) 2026

Rust, iroh/QUIC, Opus, ratatui • tincan.rs • [GitHub](https://github.com)

- Built and maintain an open-source terminal communication system with no central voice server, distributed through Homebrew, npm, Cargo, and prebuilt binaries.
- Designed a coordinator-based room protocol and direct peer audio mesh over QUIC datagrams, with Opus audio, jitter buffering, encrypted handshakes, relay fallback, and 93 automated/integration tests.

Personal Portfolio & Monitoring Stack

2026

Next.js, TypeScript, Docker, Nginx, Cloudflare, Tailscale, Prometheus/Loki/Grafana • bilalyazicioglu.com

- Self-host and operate a containerized web stack behind Nginx and Cloudflare Tunnel, with private Tailscale access, CI/CD, and Prometheus/Loki/Grafana for metrics, logs, and operational monitoring.

ARpoly — Augmented Reality API Platform

2026

Node.js, Express, MongoDB/GridFS, Redis + BullMQ, React, Three.js, Swift, Python

- Built a multi-tenant REST platform that turns phone video into 3D models (GLB + USDZ), with 280+ automated tests, GitHub Actions CI/CD to GHCR, and Prometheus/Grafana monitoring.
- Published the [@arpoly/react](https://github.com/arpoly/react) client SDK; designed a modular backend around Apple PhotogrammetrySession and CUDA Gaussian splatting.

EXPERIENCE

Kombi Klima Shop

Istanbul, TR

Software Developer Intern

2025

- Extended an e-commerce backend in **Java/Spring Boot**, improving system performance and order processing workflows.
- Built a **SQL**-based stock automation system that replaced manual tracking and significantly reduced counting errors.

Software Architecture Project ([yovi_enlb](https://github.com/yovi_enlb))

Oviedo, ES

Developer / Architect — Universidad de Oviedo

2026

- Built a multi-service hexagonal game engine in **Rust**, owning game logic and bots in a six-person team, with **Docker** deployment, **GitHub Actions** CI/CD, and arc42 documentation.

SKILLS

Languages: Rust, Go, Java, Python, C, SQL, TypeScript, JavaScript

Systems & Networking: Linux, TCP/IP, DNS, HTTP/TLS, QUIC, P2P Networking, SSH

Infrastructure & Observability: Docker, GitHub Actions, Nginx, Cloudflare, Tailscale, Prometheus, Grafana, Loki

Backend & Data: Spring Boot, Node.js/Express, REST APIs, PostgreSQL, MySQL, MongoDB, Redis

Web: React, Next.js, Three.js **Spoken:** Turkish (Native), English (Proficient), Spanish (Elementary)

LEADERSHIP & ACTIVITIES

Tuta — Open Source: Localization Translator for a privacy-first email and calendar client.

Basketball: Marmara University team and Universidad de Oviedo team — 10+ years of competitive play.
